  Information for a more active life.

CHRONIC PAIN DOESN'T HAVE TO DEFINE YOUR LIFE. THERE ARE OPTIONS.

TARGET THE PAIN | MODULATE NERVE SIGNALS | GET BACK TO WHAT MATTERS

TARGET THE PAIN

Spinal cord stimulation (SCS) targets pain signals in the spinal cord, helping reduce chronic pain from conditions such as failed back surgery syndrome, neuropathic pain, and complex regional pain syndrome (CRPS).

MINIMALLY INVASIVE

A safe, reversible, image-guided procedure that places thin leads in the epidural space to deliver mild electrical stimulation—modulating pain signals before they reach the brain.

GET YOUR LIFE BACK

Many patients experience meaningful pain relief, improved function, better sleep, and a renewed ability to return to the activities they love.
